

# Test Report

Number 19-002186-PR03 (PB-C01-0203-en-01)

Owner (Client) Selectron Elektrokimya San. ve Tic. Ltd. Sti.  
Atatürk Bulvari Köstemir yolu No:74  
34570 Silivri - İstanbul  
Turkey

Product **External pedestrian doorset, inward opening**

Designation **System: 68s**

**Shipping name: 68s Entrance Door Set**

Details Material Pine; Overall dimensions (W x H) 1120 x 2410 ; Closing condition closed and locked - main latchbolt, auxiliary latchbolts and deadbolt; Threshold: Designation Arb-336.106/107; System Arb-336.106/107; Material Aluminium system with thermal break; Lock: Designation 29787, 29980, 215102, 238354 & 215102

Special features Test sequence. Position of locking. Letter drop slot sealed. The letter drop slot was not part of the test. The vapour pressure equalisation of the glazing rebate has to be ensured. Material compatibility must be taken into account. Material durability must be taken into account.

Order Testing of air permeability, resistance to wind load, water-tightness

Contents The test report contains a total of 14 pages and annexes (16 pages).

Note The test report shall only be published in its unabbreviated form. The "Guidance Sheet for the Use of ift Test Documents" applies.

Testing of air permeability, resistance to wind load, watertightness

## 1 Execution

### 1.1 Sampling and product description

The following details have been presented to ift:

Sampler: Selectron Elektrokimya San.  
ve Tic. Ltd. Sti., 34570 Silivri - Istanbul (Turkey)  
Evidence: ift Rosenheim did not receive a sampling report.  
Date of delivery: 22.05.2019  
Description: For product identification the specimen tested is described/represented in the Annex. Material specifications, item numbers and other company-specific descriptions are details provided by the client and will be checked for plausibility by ift.

Test specimen no.: 19-002186-PK03 / WE: 48383-001

### 1.2 Basic documents \*) of the procedures

EN 1026:2016 - 03  
Windows and doors - Air permeability - Test method  
EN 1027:2016 - 03  
Windows and doors - Watertightness - Test method  
EN 12211:2016 - 03  
Windows and doors - Resistance to wind load - Test method

\*) and the relevant national versions, e.g. DIN EN

### 1.3 Short description of the procedures

The tests were performed according to the following sequence:

- Air permeability
- Watertightness
- Resistance to wind load
- Air permeability - Repeated test after wind load test
- Resistance to wind load - Safety test

#### Air permeability according to EN 1026:2016-03

Leakages of the test set-up were made visible using artificially generated fog and were sealed using permanently resilient sealant.

Air permeability was tested for the respective pressure steps at negative pressure and positive pressure in accordance with the following diagram. At the beginning of each measurement the test specimen was exposed to three pressure pulses.

Testing of air permeability, resistance to wind load, watertightness

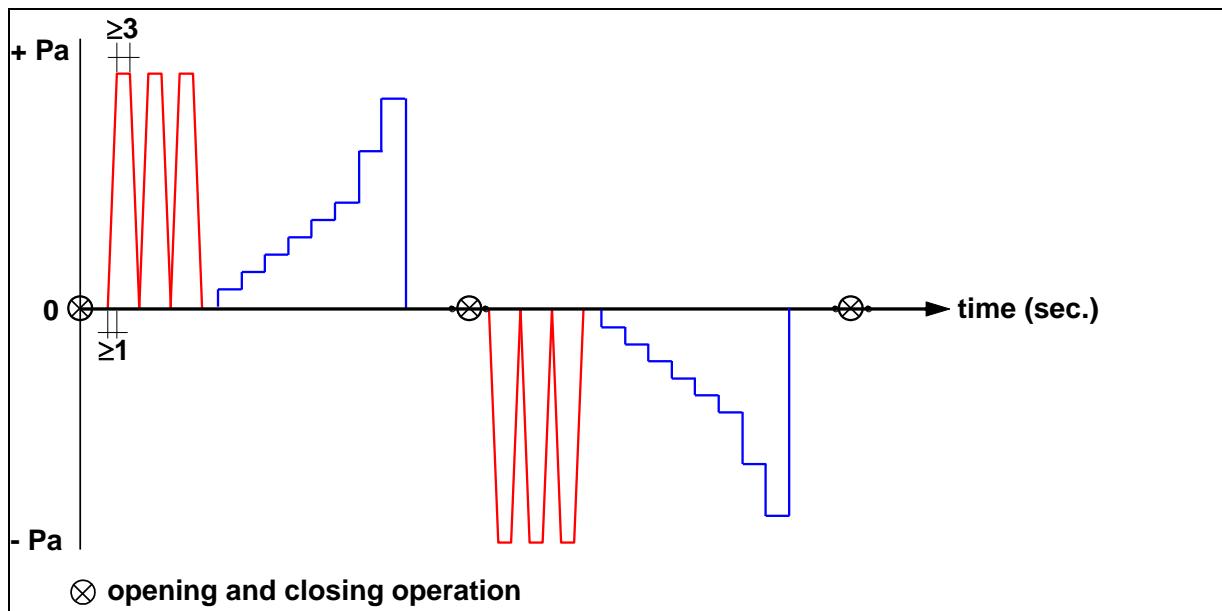

Illustration Test sequence for air permeability

Watertightness according to EN 1027:2016-03

Prior to the test, three positive pressure pulses were applied to the test specimen. Subsequently, the external surface of the test specimen was constantly sprayed with water through nozzles, conforming to the standard. After a 15-minute pressure-less spraying period an additional overpressure in terms of subsequent pressure steps was applied. The pressure steps were defined by the standard and were kept for 5 minutes each (see illustration). Watertightness was tested up to the maximum test pressure difference.

The water volume applied and the angle of spray depend on the intended type of installation of the component (protected / unprotected) and the height of the component (< / > 2.5 m) according to the standard. The required water volume and the angle of spray are documented in the measuring data sheet.

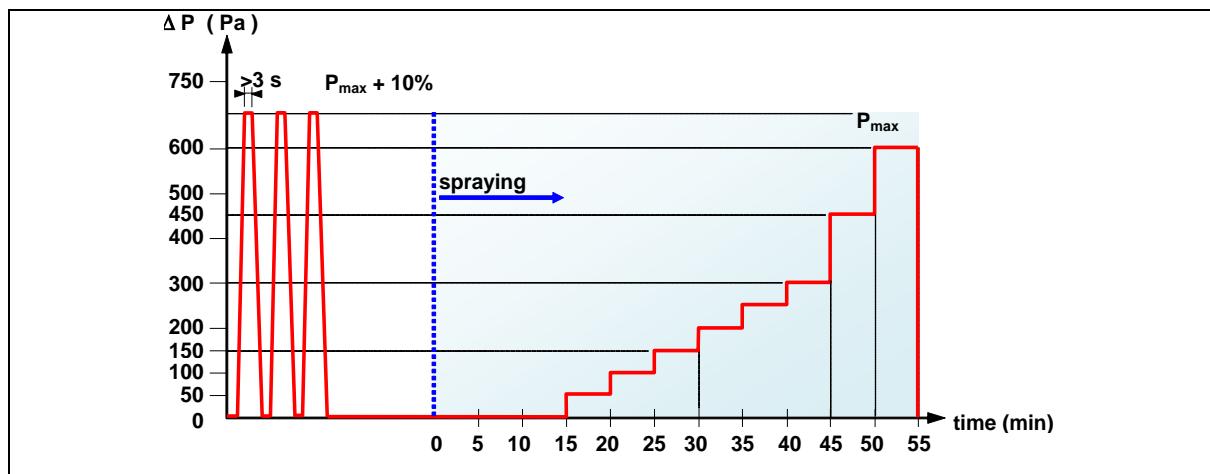

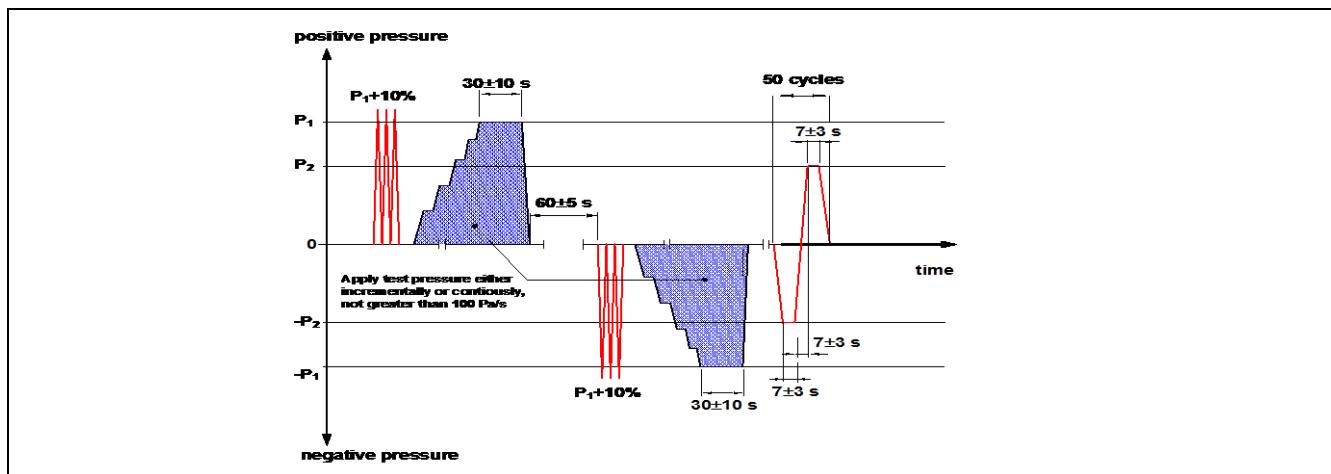

Illustration Test sequence for watertightness

Testing of air permeability, resistance to wind load, watertightness

### Resistance to wind load according to EN 12211:2016-03

Resistance to wind load was tested in accordance with the standard and conducted in steps at positive pressure and negative pressure up to the test pressure  $p_1$ . The test specimen was exposed to three pressure pulses  $\Delta p_1 + 10\%$ . This was followed by determination of the frontal deflection of test specimen for each pressure step when exposed to positive test pressure  $\Delta p_1$  and negative test pressure  $-\Delta p_1$ . Then the test specimen was subjected to 50 cycles including alternating positive and negative pressures of  $\pm \Delta p_2 = \Delta p_1 - 50\%$ .

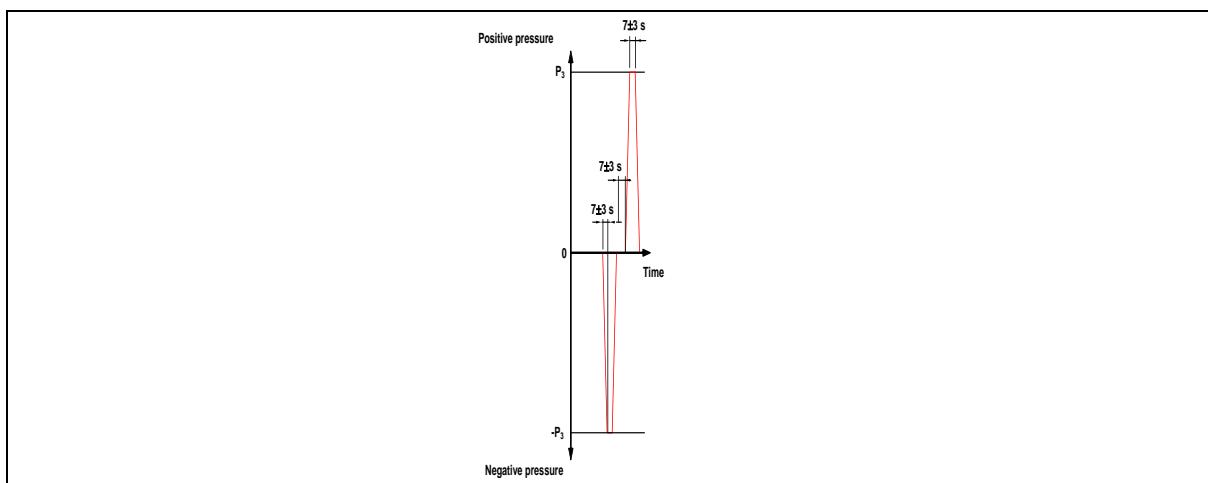

**Illustration** Test sequence for resistance to wind load - Deflection and alternating positive/negative pressures

### Air permeability - Repetition of test after wind load according to EN 1026:2016-03

Following the static resistance to wind load test (deflection) and alternating positive/negative pressure the test for air permeability was repeated in conformity with EN 12210.

### Resistance to wind load - Safety test according to EN 12211:2016-03

The wind resistance test (safety test) was conducted at negative pressure and positive pressure in accordance with EN 12211 up to test pressure  $\Delta p_3 = \Delta p_1 + 50\%$ .

**Illustration** Test sequence for resistance to wind load - safety test

Testing of air permeability, resistance to wind load, watertightness

## 2 Detailed results

### Air permeability according to EN 1026:2016-03

Project-No. 19-002186-PR03  
Basis EN 1026:2016-03  
Windows and doors - Air permeability - Test method  
Test equipment EPst/026263 - Window and facade test rig

Test specimen External pedestrian doorset, inward opening  
Test specimen No. 48383-001  
Date of test 22.05.2019  
Test engineer in charge Dimitrios Moustakidis  
Test engineer Dimitrios Moustakidis

Implementation of tests  
Deviations There have been no deviations from the test method as specified in the standard/basis.

Ambient conditions Temperature 22,3 °C Air humidity 76,4 % Air pressure 993,2 hPa  
The ambient conditions are in accordance with the standard/basis requirements.

### Measurement data/Results

Closing condition closed and locked - main latchbolt, auxiliary latchbolts and deadbolt  
Size of window frame 1120 mm x 2410 mm  
Rated joint length of active casement 1052 mm x 2367 mm  
Area of test specimen 2,70 m<sup>2</sup>  
Length of opening joints 6,84 m

Testing of air permeability, resistance to wind load, watertightness

Initial load before positive wind pressure and negative wind pressure: 660 Pa

**Table:** Air permeability at positive wind pressure

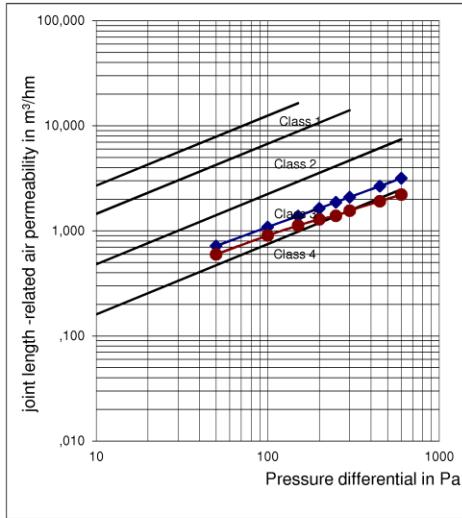

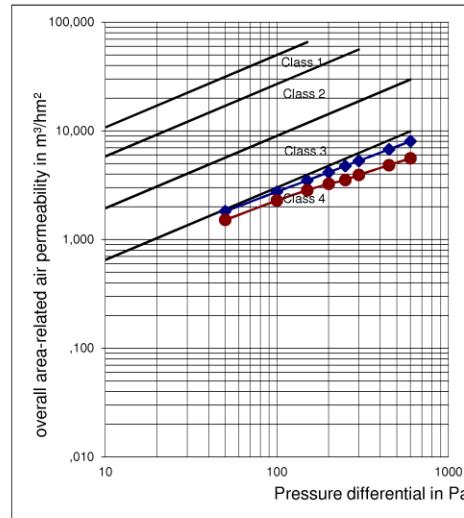

Measured results at positive wind pressure 	<b>Pressure differential Pa</b>	<b>50</b>	<b>100</b>	<b>150</b>	<b>200</b>	<b>250</b>	<b>300</b>	<b>450</b>	<b>600</b>
	Flow rate (volume) m <sup>3</sup> /h	4,9	7,4	9,4	11,2	12,8	14,3	18,2	21,7

**Diagram:** Joint length-related air permeability (positive and negative wind pressures)**Diagram:** Overall area-related air permeability (positive and negative wind pressures)

Testing of air permeability, resistance to wind load, watertightness

**Diagram:** Joint length-related air permeability (average value from positive and negative wind pressures)

**Diagram:** Overall area-related air permeability (average value from positive and negative wind pressures)

**Table:** Measured results

Reference air permeability related to joint length	$Q_{100} = 0,98 \text{ m}^3/\text{hm}$
Reference air permeability related to overall area	$Q_{100} = 2,49 \text{ m}^3/\text{hm}^2$

Testing of air permeability, resistance to wind load, watertightness

### Watertightness according to EN 1027:2016-03

Project-No. 19-002186-PR03  
Basis EN 1027:2016-03  
Windows and doors - Watertightness - Test method  
Test equipment EPSt/026263 - Window and facade test rig

Test specimen External pedestrian doorset, inward opening  
Test specimen No. 48383-001  
Date of test 22.05.2019  
Test engineer in charge Dimitrios Moustakidis  
Test engineer Dimitrios Moustakidis

Implementation of tests  
Deviations There have been no deviations from the test method as specified in the standard/basis.

Ambient conditions Temperature 21.8 °C Air humidity 82,6 % Air pressure 992,8 hPa  
The ambient conditions are in accordance with the standard/basis requirements.

### Measurement data/Results

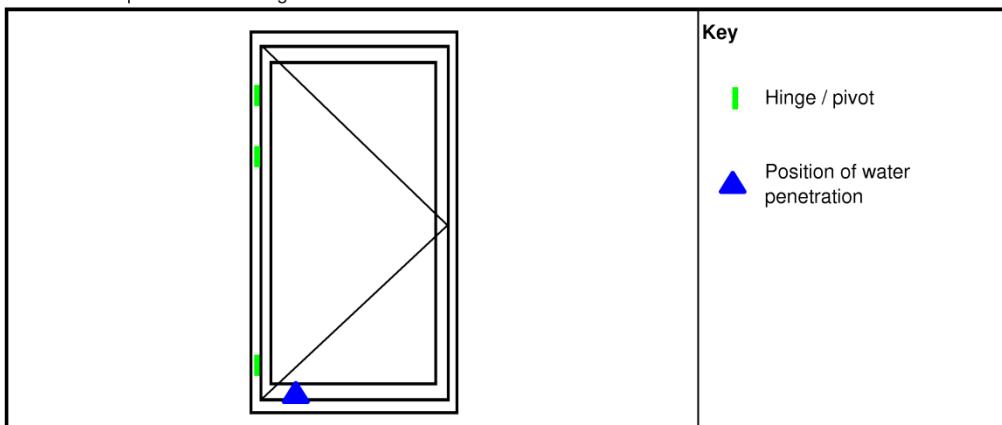

Closing condition closed and locked - main latchbolt, auxiliary latchbolts and deadbolt  
Threshold situation without additional floor simulation  
Size of window frame 1120 mm x 2410 mm

Spray method A (Spray angle 24°)

Number of spray nozzles 3  
Water amount 360 l/h  
0.36 m³/h

Initial load was applied before testing.

### View of test specimen - watertightness

Testing of air permeability, resistance to wind load, watertightness

**Table:** Test

Pressure/Pa	Notice
0	No water penetration detected
50	No water penetration detected
100	No water penetration detected
150	No water penetration detected
200	No water penetration detected
250	No water penetration detected
300	water penetration after 3 minutes, hinge side at bottom

No water penetration at up to 250 Pa detected.

Testing of air permeability, resistance to wind load, watertightness

### Resistance to wind load according to EN 12211:2016-03

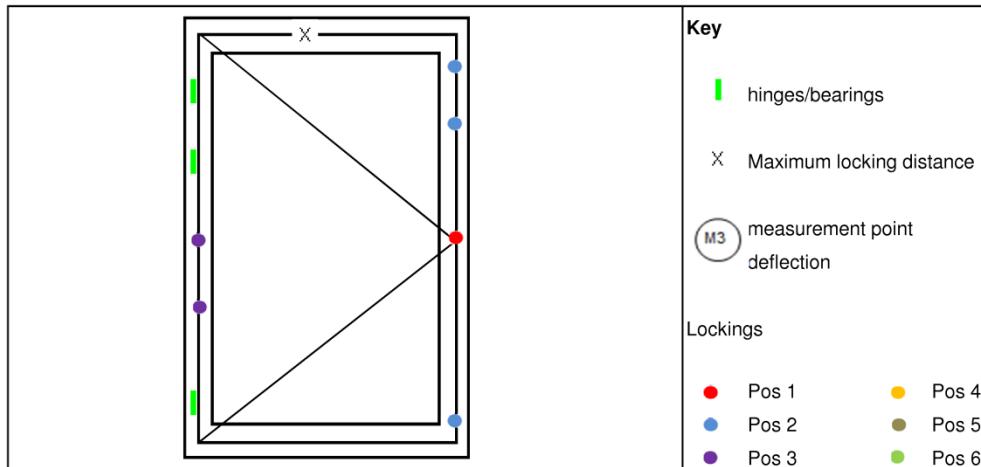

Project-No.	19-002186-PR03
Basis	EN 12211:2016-03 Windows and doors - Resistance to wind load - Test method
Test equipment	EPst/026263 - Window and facade test rig
Test specimen	External pedestrian doorset, inward opening
Test specimen No.	48383-001
Date of test	22.05.2019
Test engineer in charge	Dimitrios Moustakidis
Test engineer	Dimitrios Moustakidis

Implementation of tests  
Deviations There have been no deviations from the test method as specified in the standard/basis.

Ambient conditions Temperature 22,5 °C Air humidity 68,7 % Air pressure 992,6 hPa  
The ambient conditions are in accordance with the standard/basis requirements.

### Measurement data/Results

Closing condition closed and locked - main latchbolt, auxiliary latchbolts and deadbolt

Testing of air permeability, resistance to wind load, watertightness

Maximum test pressure:  $\pm 1600 \text{ Pa}$       3 pressure pulses of  $1760 \text{ Pa}$

The deflection was not measured because, due to the perimeter locking and the existing locking distance at the existing specimen, the loads are directly conducted into the frame and no deformation of the frame members > l/300 is likely to occur at the specified wind loads.

The test specimen was exposed to a load  $\pm 1600 \text{ Pa}$  as specified by EN 12211.

#### Dynamic wind loads (negative / positive pressures)

Table: pressure pulses

p <sub>2</sub> in Pa	200	400	600	800	1000
passed				✓	

50 cycles at p<sub>2</sub>  $\pm 800 \text{ Pa}$

#### Malfunctions at test specimen

At the test specimen were no malfunctions detected.

Testing of air permeability, resistance to wind load, watertightness

### Air permeability - Repetition of test after wind load according to EN 1026:2016-03

Project-No. 19-002186-PR03  
Basis EN 1026:2016-03  
Windows and doors - Air permeability - Test method  
Test equipment EPst/026263 - Window and facade test rig

Test specimen External pedestrian doorset, inward opening  
Test specimen No. 48383-001  
Date of test 22.05.2019  
Test engineer in charge Dimitrios Moustakidis  
Test engineer Dimitrios Moustakidis

Implementation of tests  
Deviations There have been no deviations from the test method as specified in the standard/basis.

Ambient conditions Temperature 22,6 °C Air humidity 65,2 % Atmospheric 992,3 hPa pressure  
The ambient conditions are in accordance with the standard/basis requirements.

### Measurement data/Results

Closing condition	closed and locked - main latchbolt, auxiliary latchbolts and deadbolt		
Size of window frame	1120 mm	x	2410 mm
Rated joint length of active casement	1052 mm	x	2367 mm
Area of test specimen	2,70 m <sup>2</sup>		
Length of opening joints	6,84 m		

Subsequent to the test of resistance to wind load by application of test pressures  $p_1$  and  $p_2$ , the upper limit of the achieved air permeability class must not be exceeded by more than 20% as set out by EN 12207.

The requirements were fulfilled.

Testing of air permeability, resistance to wind load, watertightness

**Resistance to wind load - Safety test according to EN 12211:2016-03**

Project-No. 19-002186-PR03

## Implementation of tests

## Deviations

There have been no deviations from the test method as specified in the standard/basis.

## Ambient conditions

Temperature 25 °C Air humidity 56 % Atmospheric pressure 992 hPa

The ambient conditions are in accordance with the standard/basis requirements.

**Measurement data/Results****Safety test****Table:** Pressure steps

		Positive wind pressure				Negative wind pressure			
p <sub>3</sub>	Pa			2400				-2400	
passed				✓				✓	

Safety test passed at up to p<sub>3</sub> ± 2400 Pa.**Malfunctions at test specimen**

At the test specimen were no malfunctions detected.

Testing of air permeability, resistance to wind load, watertightness

### 3 Summary

#### 3.1 Result

The test results are shown in the measuring data sheet, see item "Detailed results".

#### 3.2 Instructions for use

This test/evaluation does not allow any statement to be made on further characteristics of the present structure regarding performance and quality, in particular the effects of weathering and ageing.

The test was performed according to standard and the details for identification of the test specimen are complete; on the basis of this Test Report an "ift-Nachweis" (Evidence) can be issued.

Die Beschreibung des geprüften Probekörpers dient der normkonformen Identifizierung des Produkttyps, für den die festgestellten Werte gelten. Alternativ zur vorgegebenen tabellarischen Datenerfassung kann die Beschreibung auch in Form von technischen Zeichnungen, Verarbeitungsrichtlinien, Stücklisten etc. erfolgen. Zusätzliche Produktdetails bitte ergänzen.

Die \*Mindest-Angaben sind Voraussetzung für die Erstellung eines ift-Nachweises. Nur bei Angabe aller in diesem Dokument angeforderten Daten ist ggf. eine nachträgliche Gutachtliche Stellungnahme möglich. Alle \*Mindest-Angaben des Auftraggebers werden vom ift auf Plausibilität geprüft; ggf. festgestellte Abweichungen und/oder ergänzende Feststellungen werden dokumentiert.

The description of the specimen to be tested serves to identify, in conformity with the standards, the product type, for which the values determined will apply. Alternatively to the specified tabulated data collection, the description may also be made by technical drawings, processing instructions, parts lists, etc. Please supplement additional product details.

The \*minimum details are the precondition for issuing the "ift-Nachweis". Only upon provision of all requested data subsequently requested Expert Statements may be issued. All \*minimum details provided by the client will be checked for plausibility by ift, any deviations observed and/or additional findings will be documented.

Riegelausschluss Dead bolt projection	10 mm
Riegelinstand Dead bolt position	8 mm
<b>Schließblech am</b> <b>Hauptschloss</b> Strike plate, main lock	Single strike plate
<b>Typ, Hersteller</b> Type, manufacturer	29787, Maco
Material Material	Stainless steel
Abmessungen (B x H x D) Dimensions (W x H x T)	20 mm x 219 mm x 9.5 mm
<b>Befestigung</b> Fixing method	Screw-fastened
<b>Sonstiges</b> Others	Locking point under maximum hold

Test Report

no. 19-002186-PR03 (PB-C01-0203-en-01) dated 18.06.2019

owner (client) Selectron Elektrokimya San. ve Tic. Ltd. Sti., 34570 Silivri - Istanbul (Turkey)

<b>Eigenschaft</b> Characteristic	<b>Angaben des Auftraggebers (unverändert)</b> Information provided by client (unchanged)
<b>Schließblech an Nebenverriegelung</b> Strike plate, auxiliary lock	Single strike plate
Typ, Hersteller Type, manufacturer	29980, Maco
Material Material	Stainless steel
Abmessungen (B x H x D) Dimensions (W x H x T)	20 mm x 131 mm x 9.5 mm
Befestigung Fixing method	Screw-fastened
Sonstiges Others	Locking points under maximum hold
<b>Profilzylinder</b> Profile cylinder	Double cylinder
Typ, Hersteller Type, manufacturer	Titon TN62 series Asterion Three Star TS 007 35 x 55
Profilzylinderlänge Length of profile cylinder	90 mm
Ziehschutz Extraction protection	Non-existent
<b>Schlüsselrosette</b> Escutcheon (key rose)	
Rosette innen (Art, Typ) Rose internal (design, type)	Rose
Hersteller Manufacturer	Handles
Artikel-Nummer Item no.	LAZ 11 RY
Höhe Height	967 mm
Rosette außen (Art, Typ) Rose external (design, type)	Rose
Hersteller Manufacturer	Handles
Artikel-Nr. Item no.	LAZ 11 RY
Höhe Height	967 mm
<b>Bänder</b> Hinges	Three-part
Typ, Hersteller Type, manufacturer	Simonswerk, BAKA Hinge 4030 3D FD
Material Material	Stainless steel
Anzahl Number	3
Bandlänge Length of hinge	140 mm

owner (client) Selectron Elektrokimya San. ve Tic. Ltd. Sti., 34570 Silivri - Istanbul (Turkey)

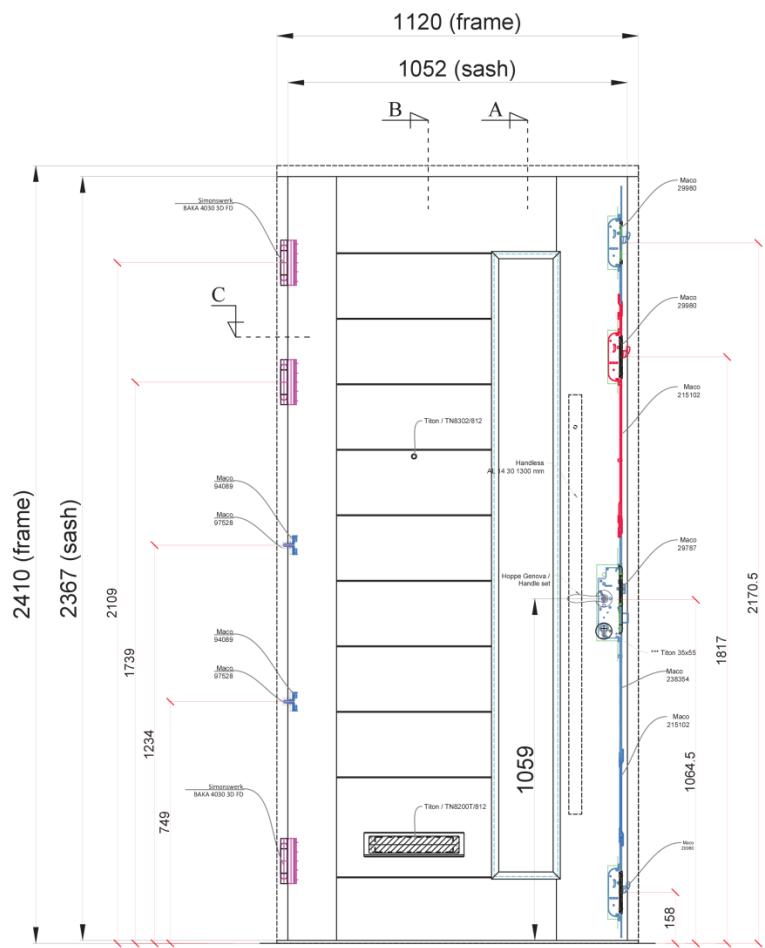

<b>Eigenschaft</b> Characteristic	<b>Angaben des Auftraggebers (unverändert)</b> Information provided by client (unchanged)
Position Position	1 <sup>st</sup> 255 mm from bottom 2 <sup>nd</sup> 1,739 mm from bottom 3 <sup>rd</sup> 2,109 mm from bottom
Befestigung Fixing method	Screw-fastened Frame M6 x 45 mm Leaf 5 mm x 40 mm
<b>Bandsicherungen</b> Hinge side security	Wedge locks
Typ, Hersteller Type, manufacturer	97528 & 94089, Maco
Material Material	Steel
Anzahl Number	2
Position Position	1 <sup>st</sup> 749 mm from bottom 2 <sup>nd</sup> 1,234 mm from bottom
Befestigung Fixing method	Screw-fastened
<b>Befestigung des Probekörpers am Montagerahmen / an die Tragkonstruktion</b> Fixing of test specimen to sub- frame / supporting construction	
Befestigungsmittel Fasteners	
Typ Type	Wood construction screw 5 mm x 100 mm
Hersteller Manufacturer	Spax
Befestigungsabstände Fastener spaced	From corner: 250 mm In-between: 500 mm
Ausführung Details	Spacer blocks towards steel frame at fixing area
Füllung der Anschlussfuge Filling of wall connecting joint	Existent, continuous and open from frame profile to steel surround frame
